Abstract

In this paper, we obtain the general solution of a new quadratic functional equation

\[ f(2x + y) + f(2x - y) + f(x + y) + f(x - y) = 10f(x) + 4f(y) \]

in matrix normed spaces. Also we investigate its Hyers-Ulam stability using fixed point method.

1. Introduction

The stability problem of functional equation originated from a question of
