Abstract

In this paper, we obtain the general solution of a new quadratic functional equation

$$f(2x + y) + f(2x - y) + f(x + y) + f(x - y) = 10f(x) + 4f(y)$$

in matrix normed spaces. Also we investigate its Hyers-Ulam stability using fixed point method.

1. Introduction

The stability problem of functional equation originated from a question of

2010 Mathematics Subject Classification: 39B72, 65Q20, 97I70.

Keywords and phrases: quadratic functional equation, generalized hyers-ulam stability, operator space, fixed point.
